GitHub | LinkedIn | LeetCode | Portfolio

Summary

Final-year Computer Science Engineering student with hands-on experience in Generative AI, Machine Learning, NLP, REST APIs, and Full-Stack Web Development. Skilled in building AI-powered and data-driven applications using Python, Flask, React.js, Scikit-learn, Pandas, NumPy, SQL, and Vector Database workflows. Strong foundation in Data Structures, Algorithms, OOP, DBMS, and problem solving with a passion for scalable AI-driven software development.

Technical Skills

- **Programming Languages:** Python, Java, SQL, JavaScript, C++, HTML, CSS
- **Frontend Development:** React.js, Responsive UI, JavaScript
- **Backend Development:** Flask, REST APIs
- **Machine Learning & AI:** NLP, TF-IDF, Cosine Similarity, Scikit-learn, Classification Algorithms, Generative AI, RAG
- **Libraries & Tools:** Pandas, NumPy, Matplotlib, Seaborn, Git, GitHub, Streamlit, Vercel
- **Databases:** MySQL, MongoDB, Vector Databases
- **Core Concepts:** Data Structures and Algorithms, OOP, DBMS, Artificial Intelligence

Projects

- **LexAssist – RAG-Based Legal AI Assistant** GitHub | Live
 - Developed a Retrieval-Augmented Generation (RAG) based legal assistant to provide contextual responses from legal documents and case-related information.
 - Implemented document chunking, embeddings, semantic search, and vector retrieval pipelines to improve intelligent document querying and legal information extraction.
 - Integrated Large Language Models (LLMs) with retrieval workflows to generate accurate and context-aware conversational responses for legal assistance.
 - Built a full-stack AI application using Flask and React.js with features such as document upload, conversational querying, and real-time AI-generated analysis.
- **AI Resume Screening System** GitHub | Live
 - Engineered an AI-powered resume screening system to analyze resume and job description compatibility using Natural Language Processing (NLP) techniques.
 - Implemented TF-IDF vectorization and cosine similarity algorithms to automate resume ranking, resume-job matching, and skill gap analysis.
 - Developed a responsive full-stack web application using Flask, React.js, SQL, and REST APIs to improve user interaction and workflow efficiency.
 - Deployed the application using GitHub and Vercel for real-world accessibility, testing, and scalable project hosting.
- **UPI Fraud Detection System** GitHub | Live
 - Developed a machine learning model to detect fraudulent UPI transactions with 80% accuracy using classification algorithms and analytical techniques.
 - Performed data preprocessing, feature engineering, model training, and evaluation using Pandas, NumPy, and Scikit-learn to improve prediction performance.
 - Applied data-driven approaches to identify suspicious transaction patterns and enhance fraud detection efficiency in financial transactions.
 - Built and deployed the application using Streamlit to provide real-time transaction analysis and interactive visualization capabilities.

Education

Parul University

2023 – Present

Bachelor of Engineering in Computer Science

CGPA: 7.95

Certifications

- Artificial Intelligence – Infosys Springboard
- Deep Learning – Infosys Springboard
- Natural Language Processing – Infosys Springboard
- Dynamic Programming Camp – AlgoUniversity
- SQL and Relational Databases – IBM SkillsBuild

Achievements

- Solved 200+ Data Structures and Algorithms problems on LeetCode.
- Participated in Vadodara Hackathon and collaborative software development projects.
- Completed AI, Deep Learning, and NLP coursework with hands-on mini projects.
